Due to V Expressions LTD's deep modeling, which can include editing of pitches, sweeps, & decays, attempting to assign your own user samples can result in radical changes in timing & pitch.

To correct these issues when assigning user samples to our modeled inputs, please follow these easy steps below.

Step 1: Follow Roland's steps 1 through 6.

Step 2: Select "Advanced".

Step 3: Set "Pitch" & "Pitch Seep" to "0".

Step 4: Set "Decay" to "100".
Step 5: Continue with Roland's 7th step.

Step 6: Save your backup.

Your assigned user sample should now play with proper pitch, length, & decay.

Assigning a User Sample to an Instrument and Playing It

1. Press the [INSTRUMENT] button.

2. Press the PAGE [UP] button to access page 1 (INSTRUMENT).

3. Press the [F1] (INST) button.

4. Select the pad that you want to edit (p. 20).

5. Move the cursor to the instrument group, and use the [–] [+] buttons or the dial to select "USER SAMPLE."

6. Turn the [R1] knob to select a user sample.

   * Only the parameters of the INSTRUMENT screen (ADVANCED tab) can be edited for an instrument to which a user sample is assigned.

7. Press the [KIT] button to return to the DRUM KIT screen.

   When you strike a pad to which the user sample is assigned, you hear that user sample.

   MEMO

   • You can assign a user sample to the instrument of each pad, and make mute group settings (p. 26) so that you can switch between user samples by striking the pads.

   • You can also assign a user sample to a sub-instrument.
